Meltdown/Spectre CPU Vulnerabilities and Compliance Software

BasisCode has completed all available OS updates, patches, and other necessary software updates including Antivirus and SQL Server to all environments. Employee machines will also continue to be updated and validated.

As we are aware this is an ongoing threat, we will continue to apply additional security related updates as they are released.

BasisCode takes security very seriously and we are still monitoring all environments closely. In addition, we are also still monitoring performance to ensure the application continues to perform at a high level for your business needs.

Please let us know if you have any questions or concerns. Please feel free to contact us.
