OBJECTIVES

The aggressive portfolio model is for investors with a low-income objective, but a higher growth objective and risk tolerance. It involves a long time horizon of 8+ years in order to seek higher, long-term capital appreciation. This model recognizes the possibility of high fluctuations in year-to-year market values with the goal of generating market level returns, mostly through the use of higher-risk equities.

⁸Capture Ratios illustrate rolling annual returns compared to the S&P 500. During negative markets, a number below 100% means the portfolio has declined less than the S&P 500. During positive markets, Flat to Single Digit Markets and Double Digit Markets, a number below 100% means the portfolio appreciated less than the S&P 500. A negative Capture Ratio indicates the portfolio moved in the opposite direction of the S&P 500. Negative Market is defined as annual returns less than 0%; Flat to Single Digit Market is defined as annual returns from 0-9.99%; and Double Digit Market is defined as annual returns of 10% or greater. ⁹Annual performance returns for less than one year are not annualized.

The information provided is hypothetical and based on a backtested performance simulation. Backtested performance does not represent actual performance. These model portfolio strategies were not offered until August 2011.

This information should be reviewed with a financial professional. As with any investment strategy, a review of all disclosures is an integral part of, and should be read before, investing. Past performance is not predictive of future performance.

OBJECTIVES

The balanced portfolio model is for investors with a moderate-risk tolerance and moderate-growth and income objectives. It involves a time horizon of 4-7 years to allow your investments to absorb potential market volatility. This model seeks to achieve above average capital appreciation over time by allocating your money into a mix of equities and fixed income.

Disclosure for Backtested Performance Information on the BCM Model Portfolio Strategies:

1. Beacon Capital Management, Inc. (BCM) was incorporated in July 2000, and placed its first independent client investments in July 2000. The performance information presented in the chart or table represents backtested performance based on live fund results from April 1, 1993, to the period ending date shown using the strategy. Backtested performance is hypothetical (it does not reflect trading in actual accounts) and is provided for informational purposes to indicate historical performance had the model portfolio strategies been available over the relevant period. BCM did not offer the model portfolio strategies until August 2011. Prior to August 2011, BCM did not manage client assets using these model portfolio strategies. Client portfolios are monitored and rebalanced, taking into consideration risk exposure consistency, transaction costs, and tax ramifications to maintain the investment objective of each model portfolio strategy.
2. A review of the Disclosure for BCM Sources and Description of Data is an integral part of, and should be read in conjunction with, this explanation of backtested performance information.
3. **Backtested performance does not represent actual performance and should not be interpreted as an indication of such performance. Actual performance for client accounts may be materially lower than that of the model portfolio strategies, and backtested performance should not be considered indicative of the skill of the adviser.**
4. **Backtested performance results have certain, inherent limitations. Such results do not represent the impact that material economic and market factors might have on an investment adviser's decision-making process if the adviser were actually managing client money. Backtested performance also differs from actual performance because it is achieved through the retroactive application of model portfolios (in this case, BCM's model portfolio strategies) designed with the benefit of hindsight. As a result, the models theoretically may be changed from time to time to obtain more favorable performance results.**
5. Backtested performance results assume the reinvestment of dividends and capital gains and rebalancing to maintain the investment objective. In reality, client accounts will be rebalanced either more or less frequently depending on the fluctuation of the funds and the cash flow activity of the client. The performance of the BCM model portfolio strategies and satellite funds reflects, and is net of, the effect of BCM's annual investment management fee of 1.8%, billed monthly. A 1.8% annual fee (or \$400 annual minimum) is the maximum fee BCM charges clients that engage BCM directly. However, under certain types of relationships, the total fee (BCM investment management fee plus an additional Advisor fee) charged may be higher than 1.8% annually. Depending on the size of your assets under management, your investment management fee may be less. Fund fees and expenses have been deducted from results.

Although the funds BCM recommends attempt to minimize tax liabilities from short and long term capital gains, any resulting tax liability is not deducted from performance results. Performance results also do not reflect transaction fees and other expenses charged by broker-dealers and/or custodians, which reduce returns. BCM is not paid any brokerage commissions, sales loads, 12b1 fees, or any form of compensation from any fund company or broker dealer. The only source of compensation from client investments is obtained from asset based advisory fees paid by the client.
6. For all data periods, annualized standard deviation is presented as an approximation by multiplying the monthly standard deviation number by the square root of twelve. Please note that the number computed from annual data may differ materially from this estimate. We have chosen this methodology because Morningstar, Inc. uses the same method.
7. For all data periods, beta is a statistical measurement of volatility as compared to a benchmark. The Vanguard S&P 500 (VFINX) is used as the benchmark for comparison beta calculations.
8. For all data periods, alpha is a statistical measurement of excess return for risk borne as compared to a benchmark. The Vanguard S&P 500 (VFINX) is used as the benchmark for comparison alpha calculations.
9. Not all BCM clients follow our recommendations, and depending on unique and changing client and market situations, we may customize the construction and implementation of the model portfolio strategies for particular clients, including the use of tax-managed funds, tax-loss-harvesting techniques, and rebalancing frequency and precision. The performance of custom asset allocations may differ materially from (and may be lower than) that of the model portfolio strategies.
10. Performance results for clients that invested in accordance with the model portfolio strategies will vary from the backtested performance provided due to market conditions and other factors, including investments' cash flows, fund allocations, frequency and precision of rebalancing, tax-management strategies, cash balances, lower than 1.8% advisory fees, varying custodian fees, and/or the timing of fee deductions. As the result of these, and other potential variances, our clients have not, and are not expected to have, achieved the exact results shown since August 2011, when we placed our first investments. Actual performance for client accounts may differ materially from (and may be lower than) that of the model portfolio strategies.
11. **As with any investment strategy, there is the potential for profit as well as the possibility of loss.** BCM does not guarantee any minimum level of investment performance or the success of any model portfolio strategy or investment strategy. All investments involve risk (the amount of which may vary significantly), and investment recommendations will not always be profitable. A review of the Disclosure for BCM Sources and Description of Data under section **Vantage 2.0 Model Portfolio Strategies** is an integral part of and should be read before an investment is made.
12. **Past performance does not guarantee future results.**
13. **DISCLAIMER: THERE ARE NO WARRANTIES, EXPRESSED OR IMPLIED, AS TO ACCURACY, COMPLETENESS, OR RESULTS OBTAINED FROM ANY INFORMATION PROVIDED HEREIN OR ON THE MATERIAL PROVIDED.** This document does not constitute a complete description of our investment services and is for informational purposes only. It is in no way a solicitation or an offer to sell securities or investment advisory services, except, where applicable, in states or countries where we are registered or where an exemption or exclusion from such registration exists. Any statements regarding market or other financial information is obtained from sources that we, and our suppliers, believe reliable, but we do not warrant or guarantee the timeliness or accuracy of this information. Neither our information providers nor we shall be liable for any errors or inaccuracies, regardless of cause, or the lack of timeliness of, or for any delay or interruption in the transmission thereof to the user. All investments involve risk, including foreign currency exchange rates, political risks, different methods of accounting and financial reporting, and foreign taxes.

Disclosure for BCM Sources and Description of Data

The following descriptions indicate how live (or actual) fund results are strung together to simulate similar risk and return characteristics back to 1993. This reduces the standard error of the mean, which is unacceptably high for periods less than 20 years.

Vantage 2.0 Model Portfolio Strategies

1. There are three Vantage 2.0 Model Portfolio Strategies – Aggressive, Balanced, and Conservative.
2. The key element of construction is the use of three primary portfolios that represent stocks, bonds, and cash. Each primary portfolio is comprised of mutual funds/ETFs. The underlying mutual funds/ETFs and allocations of the primary stock, bond, and cash portfolios are the same in all Vantage 2.0 Model Portfolio Strategies; only the allocation to the primary stock, bond, and/or cash portfolios changes to meet the investment objective. The changes and timing of the allocation to the primary stock, bond, and/or cash portfolios are determined by a proprietary formula, which is constant throughout the time period simulated.
3. BCM monitors an equity benchmark index daily, which is the basis for the primary stock portfolio used in the Vantage 2.0 Model Portfolio Strategies. When that equity benchmark index falls by 10% from its previous high, based on closing prices, the primary stock portfolio is liquidated the following day, and the proceeds are invested in the primary bond portfolio. **This does not guarantee losses from the primary stock portfolio will be limited to 10% or less. There is the potential for larger losses due to rapidly moving prices.**
4. BCM monitors a bond benchmark index daily, which is the basis of the allocation for the primary bond portfolio used in the Vantage 2.0 Model Portfolio Strategies. When that bond benchmark index falls by 4% from its previous high, based on closing prices, the primary bond portfolio is liquidated the following day, and the proceeds are invested in a short-term bond position. **This does not guarantee losses from the primary bond portfolio will be limited to 4% or less.** In many cases, the primary bond portfolio may experience larger than 4% losses as the current holdings may be more sensitive than the bond benchmark index to several risks that affect bond prices. Market prices of bonds may be affected by several risks, including without limitation: interest rate risk - a rise in interest rates may reduce the value of the primary bond portfolio; default or credit risk - the issuer's ability to make interest and principal payments; and liquidity risk - the inability to sell bond investments promptly prior to maturity with minimal loss of principal. **In addition, there is the potential for larger losses due to rapidly moving prices. Investments in the primary bond portfolio do not guarantee against losses.**
5. **The Vantage 2.0 Model Portfolio Strategies' risk management strategies do not guarantee investment losses will be limited. All investments involve risk and past performance does not guarantee future results, nor should past performance be used to determine potential future maximum losses.**

Disclosure for Benchmark

1. Benchmarks provide the standards against which investment performance is measured. Beacon utilizes Morningstar Category classifications, which are assigned by Morningstar, Inc., as a benchmark for each portfolio. Morningstar is an independent publisher of portfolio research and ratings.
2. Morningstar Category classifications break portfolios into peer groups that help investors compare historical performance and assess potential risk.
3. Morningstar assigns categories to all types of portfolios, such as mutual funds, variable annuities, and separate accounts. Portfolios are placed in a given category based on their average holdings statistics over the past three years. Morningstar's editorial team also reviews and approves all category assignments. If the portfolio is new and has no history, Morningstar estimates where it will fall before giving it a more permanent category assignment. When necessary, Morningstar may change a category assignment based on recent changes to the portfolio.
4. A full description of each Morningstar Category can be provided upon request.
5. No management fees have been deducted from the performance of the Morningstar Categories.
6. For all data periods, beta is a statistical measurement of volatility as compared to a benchmark. The Vanguard 500 Fund (VFINX) is used as the benchmark for comparison beta calculations, which is calculated for each Beacon portfolio and Morningstar Category.
7. For all data periods, alpha is a statistical measurement of excess return for risk borne as compared to a benchmark. The Vanguard 500 Fund (VFINX) is used as the benchmark for comparison alpha calculations, which is calculated for each Beacon portfolio and Morningstar Category.

Disclosure for Target Return

1. Target returns provide a performance objective for each portfolio over the course of a full market cycle, which is typically three to five years. Target returns are used to forecast and measure a portfolio against financial planning objectives. The baseline performance objective accepted by the industry is inflation, as measured by the Consumer Price Index (CPI-U).
2. Target returns are measured by inflation plus a constant annualized return. For example, a target return of inflation plus 4% is attempting to achieve a 4% return above inflation over the course of a full market cycle. No management fees have been deducted from the performance of the target return.
3. A target return is created for each portfolio based on the selection and allocation of Beacon model portfolio strategies and/or satellite funds.
